Professional Summary

Computer Science undergraduate with full-stack development experience across front-end, back-end, and API layers, backed by a solid grounding in data structures, algorithms, and the software development lifecycle. Comfortable working in Agile teams with Git-based version control, CI/CD pipelines, and cloud fundamentals (AWS), and shipping production-style features – from database-backed CRUD flows to containerized deployments – both independently and as part of a team.

Education

University of Petroleum and Energy Studies (UPES) B.Tech CSE (Major: DevOps) CGPA: 7.34	2023 – 2027 Dehradun, India
Delhi Public School, Ranipur Class XII 78%	2022 – 2023 Haridwar, India
Delhi Public School, Ranipur Class X 91.8%	2020 – 2021 Haridwar, India

Technical Skills

- **Languages:** Python, C, C++
- **CS Fundamentals:** Data Structures & Algorithms, Object-Oriented Programming, Software Development Lifecycle (SDLC), Computer Networks, DBMS, OS
- **Full-Stack Web:** React.js, Node.js, Express.js, FastAPI, REST APIs, HTML5/CSS3, Tailwind CSS
- **Cloud & Infrastructure:** AWS (EC2, ASG, ALB, IAM, EKS, Security Groups), Docker, Kubernetes, Terraform, Nginx, Jenkins, GitHub Actions, GitLab CI, Linux
- **Databases:** MongoDB, PostgreSQL, MySQL
- **Version Control:** Git, GitHub, GitLab

Internships

Xebia IT Architects	Jun 2026 – Jul 2026
• Built the front-end of a university management dashboard for a client, owning the Student Management module – CRUD, archive, and auto ID-generation pages – end-to-end. • Integrated REST APIs to connect the module with the backend, collaborating out of a shared GitLab repository under the project lead's Git-based workflow.	
Bhavyaa Enterprises Pvt. Ltd.	Jun 2025 – Jul 2025
• Collaborated with the development team to design, code, and test a full-stack website end-to-end, setting up a GitHub Actions CI workflow for automated builds/tests. • Implemented authentication and RBAC, documented the setup, and handed off the codebase to the startup team for further development.	

Projects

IncidentIQ: AI Anomaly Detector
• Tech Stack: React 18, Node.js, FastAPI (Python), PyTorch, scikit-learn, PostgreSQL (TimescaleDB), Docker Compose • Built the dashboard UI and API layer around an ML ensemble that predicts SLA breaches 10–15 min ahead, orchestrating ten containerized Docker services on a self-hosted stack.
Modelflow: Zero-Configuration AI Deployment Platform
• Tech Stack: React.js, Node.js, Express.js, MongoDB, Python, Docker, AWS (EC2, ASG, ALB), Nginx, Google OAuth • Led frontend development and deployed the platform on AWS (Auto Scaling Groups, ALB, Nginx), containerizing every service with Docker for consistent, repeatable releases.
Solaris: AI-Powered Solar Feasibility & Financial Analytics Platform
• Tech Stack: React 18, Three.js, Node.js, FastAPI (Python), MongoDB, Tesseract.js, Docker, Nginx • Built the frontend flow with OCR-based bill upload (Tesseract.js) feeding forecasting logic, and deployed the app as containerized microservices behind Nginx.

Accomplishments

Solved 100+ DSA problems on LeetCode By LeetCode	Ongoing
AWS Cloud Quest: Cloud Practitioner By AWS Training & Certification	July 2026
Participated in Build4Bharat: Hackathon 9.0 By UPES-CSI Student Chapter, School of Computer Science	March 2026
Finalist, Hack the Throne – National Level Hackathon By IIIT-Una (MERAKI – Annual Technical Fest)	February 2026
Runner-up, ByteQuest – Technical Challenge By UPES ACM and ACM-W Student Chapter	April 2025
